SECURING THE ENTERPRISE

Supply Chain-Enabled Cyber Risk

Will Durkee, CISSP

The Manufacturer's Association Business Espionage Forum
June 25th, 2019

MY AGENDA

- Value Drivers
- Cyber Risks
- News From the Front
- What you can do

DEFINING VALUE DRIVERS

- Technology
- Manufacturing
- Personnel
- Suppliers
- Financial

CYBER RISK

- Not all cyber risk resides in IT
- Make sure security matches the business model and goals
- Security is a process
- Periodically assess your risks
- Resilience matters

THIRD PARTY RISKS

- High profile breaches still hitting the news (Target, Verizon, various healthcare, etc.)
- Physical and logical access given to contractors, service providers, and suppliers.
- It's not just about "data." Information and services are valuable.
- Regulators starting to care

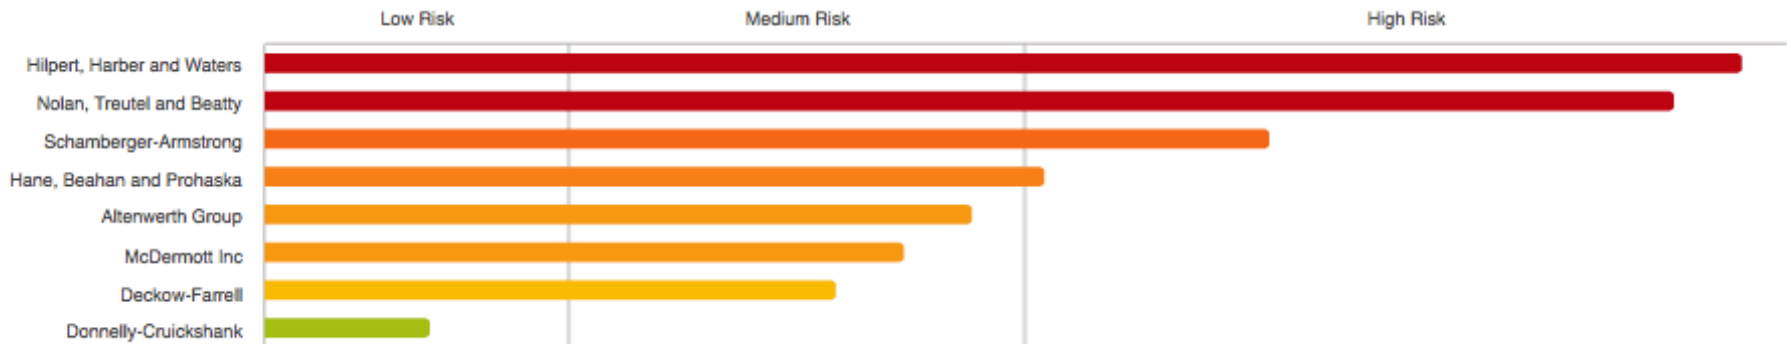

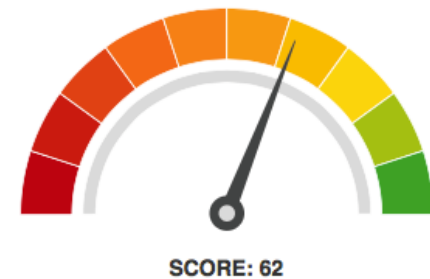

NEWS FROM THE FRONT

- Companies still not asking the right questions
- Too many silos
- Still focused too much on IT hardware/software or compliance
- Lack of M&A diligence is VERY EXPENSIVE!
- Decent incident response but often ignoring scenarios around third-party incidents

WHAT CAN YOU DO?

- Dependencies and Diligence
- Communicate the risk
- Go through the risk management process
- It's not easy, but it's not too complex
